Everest Group ES Top 50™

 [View the video](#)

What Is the Everest Group Engineering Services Top 50™?

Engineering Services (ES) includes all activities (across software, embedded, mechanical, and process engineering functions) that support the design, development, testing, and management of products, both hardware and software. The Everest Group Engineering Services Top 50™ is a global list of the 50 largest third-party providers, based on their ES revenues and year-on-year growth. This is the sixth edition of the definitive listing.

Why the Everest Group Engineering Services Top 50?

This report provides a clear and objective overview of the third-party services market and how ES providers compare to each other. It will assist enterprises in identifying the top ES providers and their functional coverage, and ES providers in benchmarking themselves against peers. It will also be useful for other parties interested in the space, such as private equity and venture capital firms.

ES providers have continued to enhance their engineering capabilities and acquire companies to expand their scale and enter new markets. Outsourcing has risen since 2022, albeit at a slow pace. Key growth drivers include platformization and the softwarization wave, investments in Software Defined Everything (SDX) in both automotive and medical devices, experimentations with Gen AI in diverse applications, advancements in connected products, Industry 4.0, and a consistent rise in sustainability and green technology practices in software and digital engineering.

How does Everest Group define Engineering Services?

The major horizontals covered under engineering services are:

- **Software product engineering services:** Software product engineering services include developing all customer-facing and commercially off-the-shelf products/platforms. It excludes system integration and custom application development.
- **Embedded engineering services:** Embedded engineering services involve designing, developing, and integrating software, hardware, and firmware into products for enhanced functionality and seamless communication. These services encompass tasks such as system architecture, component selection, coding, testing, and integration to create efficient embedded systems.
- **Mechanical engineering services:** Mechanical engineering services are those associated with the design and maintenance of mechanical and electrical systems. They are common in the design and analysis of heating and cooling systems, transport systems, medical devices, weapons, etc.
- **Network engineering services:** Network engineering services covers the design, development, stimulated testing, certification, deployment, network assurance and orchestration, and maintenance of commercial telecommunication networks, as well as ideation, development, testing, and support of network hardware equipment.

- **Manufacturing engineering services:** Manufacturing engineering services refers to the design, optimization, and management of manufacturing processes, systems, and facilities to maximize efficiency, quality, and cost-effectiveness in the manufacturing of products.

How is the Everest Group Engineering Services Top 50™ determined?

There are two distinct steps involved in determining the Engineering Services Top 50:

- **Criterion:** Only the 50 largest service providers, based on their previous year’s ES revenue (CY 2023 for this report), qualify for the Engineering Services Top 50 assessment
- **Rank determination:** Service providers are ranked based on their previous year’s ES revenue (CY 2023 for this report) and year-on-year growth. Growth comprises two parameters: absolute growth (measured as change in ES revenue in US\$) and percentage growth (measured as percentage change in ES revenue)

We use multiple sources of information to conduct our analysis and determine the list rankings, including:

- Reported ES revenues and growth figures by listed companies
- Bottom-up revenue and growth build leveraging Everest Group’s proprietary ES databases, tracked and maintained at functional levels
- Information shared/validated by service providers

*Year-on-year revenue change in US\$

**Year-on-year percentage of revenue change

Key updates from the ES market

Decrease in growth in the engineering services market

Following an expansion in 2022, global ER&D grew by only 6.5-7.5%, from US\$72.5-73 billion to US\$77.5-78 billion in 2023. Despite the economic slowdown, this steady growth encourages us to believe the market will continue to improve in the future.

The ES Top 50's share of the global engineering services market total revenue improved by 8 percentage points from 2022 to 2023.

Themes contributing to market growth in CY23

Platformization and softwarization, a prominent trend of 201x, continued to take center stage in 2023 and will do so in different shapes and forms beyond

Continued investments in **software defined everything** drove the evolution in both automotive and medical devices

Providers across industries **experimented with generative AI** to enhance overall efficiency, boost employee productivity, improve customer experience, reduce turnaround time, and achieve cost savings

Providers developed consulting practices and leveraged partnerships to execute **digital manufacturing and Industry 4.0** use cases, demonstrating immediate value and **embracing sustainable practices** despite ROI concerns

Self-sufficiency in chip design gained momentum, with firms investing heavily in chips to power **connected products**, vehicles, networks, and AI workloads

ES acquisitions in 2023

[ILLUSTRATIVE]

Value addition to the acquiring entity

- Scaling/enhancing existing capabilities
- New/niche capabilities
- New market/location access
- Enhancing presence in nearshore regions

Key updates from the ES market

European ES Top 50 providers dominate market growth in 2023

Among the providers listed in the Engineering Services Top 50™ 2024, European companies expanded most rapidly, with a growth rate of 11.8%, followed by APAC, with a growth rate of 10%. North America's growth rate was 6.3%.

Among the featured engineering service providers, those headquartered in Europe hold the largest share of engineering services revenue.

Predominantly, these firms are headquartered in Europe, followed by North America and APAC.
